FURNITURE

*THE SUPERIOR
WOOD ALTERNATIVE*

Today our mission remains the same — to recover and transform landfill-bound and ocean-bound plastic into beautiful outdoor furniture that will last for generations to come.

Luar
F U R N I T U R E

Luar Outdoor Furniture is a division of Pinseeker UK Ltd who have been manufacturing high quality products to the golf course industry for almost 20 years. Over six years ago Pinseeker were the first company in the UK to create a thoughtfully and complimentary designed suite of weatherproof, maintenance free range of outdoor golf course furniture using recycled plastic materials. Since 2015, we have diverted over 100 metric tonnes of plastics from landfills and the oceans. Purchasing our products is not only a personal investment, but a conscious commitment to the planet.

With a passionate commitment to innovation, we are constantly developing new ways to transform recycled material into durable, weather-resistant and environmentally-conscious products for markets such as golf courses, holiday parks, recreation and more. We continue to push the boundaries of innovation with our woodgrain and standard colour materials.

Customers concerned about the environment can feel confident they have made a good decision by purchasing our products. Unlike other types of resin and polymers, HDPE is the most environmentally stable, giving off no harmful fumes. Our products are designed to hold up to all kinds of adverse weather conditions for decades.

Introducing Luxewood™: The superior wood alternative

Even the highest quality hardwoods will warp, fade and very quickly lose their original appeal. Luxewood rivals wood as the material of choice for numerous applications. Our wood grain material has classic organic lines and is free from artificial shapes or repeat patterns.

Unlike wood, Luxewood never needs to be sealed, stained or painted. The material is highly resistant to stains and a simple clean with soapy water is all that is required under normal circumstances.

At Pinseeker we are always trying to push the boundaries of innovation and technology to spawn new ideas and products in the market. As the range continues to evolve, so does our ability to solve problems brought to us by our customers.

ENVIRONMENTALLY FRIENDLY	GUARANTEED	ULTIMATE DURABILITY	UV & WEATHER RESISTANT	WEATHERED FINISH	LOW MAINTENANCE	MIX & MATCH
Made from 100% post consumer HDPE.	Up to 10 Year limited warranty.	Will never rot splinter or crack.	Proven in all weathers around the world.	Virtually indistinguishable from natural timber.	No surface finishes to repaint or stain. Simply clean with soapy water.	Mix and match colour and textures to create something unique.

FAQs

Is your product recyclable?

Absolutely. Luar products are recyclable and manufactured from recycled plastic. Sourced from post-consumer and post-industrial recycled high-density polyethylene (HDPE), all products can be recycled after project life-cycle. We are proud to be a UK manufacturer and even plan to introduce a buy-back program to re-recycle our products - please contact our customer service team for more details.

Will the colour fade rapidly or change like other recycled furniture?

No, all our recycled plastic products have Ultra-Violet (UV) stabilisers compounded into them to help protect the colour and integrity of the base resin for years to come. Because our products contain no organic fibres you will not observe a rapid colour shift or fade as is commonly experienced with other products. However, persistent and aggressive UV exposure to sun and heat cycles does eventually affect polymer-based product's surface finish and colour stability over long term life cycle as with most materials.

“Our recycled plastic products will not rot, splinter, corrode, or decay...”

Sustainability

Our customers need products that can get the job done right and perform for the long haul. Our recycled plastic products will not rot, splinter, corrode, or decay like more traditional materials. They're easy to clean, never need to be painted, stained, or sealed, and are impervious to moisture and insects. And with additives such as UV stabilizers, colorant, and strengtheners, we can ensure consistent colour and texture that cannot be equalled by alternative materials. You won't find longer-lasting or lower-maintenance materials.

Care & Maintenance

To maintain your furniture we recommend you clean it regularly with a mild soap and warm water solution. Power washing is acceptable at the lowest PSI and from a distance of two feet. Anything other than this will void the warranty. Items should not be left on the surface of your furniture/ accent pieces for extended periods as this may cause discolouring or staining.

Our marine grade stainless steel fasteners are virtually maintenance free under normal conditions. If you live in coastal or high salinity environments regular washing/rinsing with fresh water helps to avoid tarnishing or corrosion of the product.

The Prestbury Dining Table

This modern outdoor dining table has been designed to seat four adults in superb comfort, it is constructed entirely from recycled plastic meaning it cleans up easily and requires no maintenance other than a routine clean.

AGUAGUARD-365

State of the art anti-bacterial fabric technology powered by HeiQ ViroBlock. A range of unique UV resistant fabric for outdoor use with Anti-Bacterial Protection.

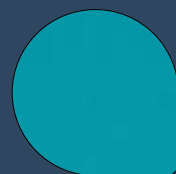

What is it?

A safe, highly advanced anti-bacterial protection system for upholstery fabrics, also effective against viruses including Covid-19.

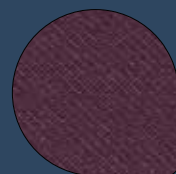

Why bother?

The value of and requirement for materials with these properties has been unequivocally validated by recent and ongoing global public healthcare crises. Whilst research indicates viruses and bacteria survive longer on hard surfaces, soft surfaces like textiles can provide a large hosting area and benefit their carryover.

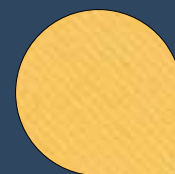

Upholstery fabrics treated with AguaGuard365 actively inhibit viruses (including Covid-19) and kill bacteria upon contact on the surface. By keeping the textile free of viable viruses and bacteria, AguaGuard365 treated performance upholstery fabrics help to significantly minimise the potential for re-transmission of pathogens.
